## Review

## Bluefairy Review

**Bluefairy™** Review enables the analysis and review of past events recorded by the **nanoEdge™** Tracking System.

**Bluefairy™** Review can play back the displacements of any personnel wearing a badge or any tagged asset. Managers can focus on a single person or asset, or a multitude of people and assets simultaneously. This allows for fast and easy cross-referencing and interaction analysis between people and/or assets. This is especially useful for process optimization, theft prevention, safety and security procedures or mustering reports.

**Bluefairy  
Review**

*Review allows users to playback and analyze past events*

**Bluefairy™** Review offers an intuitive interface to play back the displacements of any badge-wearing personnel and/or tagged assets. Positional data from every single badge or tag within an enterprise is recorded and stored in databases by **Bluefairy™** Server. **Bluefairy™** Review provides an easy way of drilling down into those databases and retrieving that data to obtain useful information. By cross-referencing this information with data obtained in **Bluefairy™** Review or **Bluefairy™** Inspector, it is possible to extract information regarding interactions. This is useful for analyzing the efficiency of business processes and safety procedures, as well as security and workflow optimization.

**Bluefairy™** Review is an ideal tool for post-incident analysis. Managers, as well as security and emergency response teams can easily analyze the events leading to an incident and determine its cause.

### System Requirements

Operating System:	Microsoft® Windows 7, XP® SP2 or Vista® Microsoft® Windows Server® 2003 or 2008
Processor:	Intel® Pentium 4® 2.8GHz or greater
Memory:	512 MB RAM minimum
